Winning with HPE ProLiant - Trusted Security by Design

HPE continues to lead and deliver security innovations from edge to cloud:

Chassis intrusion: detects any physical intrusion into the chassis. iLO logs an event when the access panel is opened or closed. Chassis intrusion monitoring and iLO reporting occur as long as the server is plugged in, regardless of the server power state.

Bezel Lock: helps prevent unauthorized physical access to the front panel components

TPM2.0 module: The HPE Trusted Platform Module (TPM) works with programs such as Microsoft Windows® BitLocker™ to increase data security by storing the encryption startup key in hardware on the server, which provides a more secure environment by pairing the drive to the server. Pairing the drive to the server helps prevent the encrypted drive from being read if inserted in a different server.
